

Something for everybody. And every body.

Waiting never
felt so good!

GRAND RAPIDS

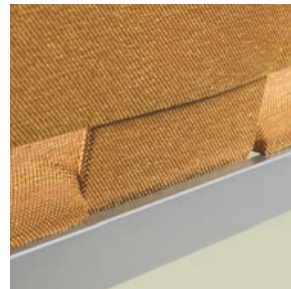

CHAIR COMPANY

Perfect in any setting.™

Nadia makes everyone feel welcome.

From aesthetic choices for every taste to configuration options for every size person and group, Nadia is all about inclusion. She makes everyone feel welcome – in healthcare waiting rooms and college common areas, hotel lobbies and corporate reception areas, libraries and lounges, and just about anywhere else people gather.

Built-in Flexibility. A patented upholstered aluminum j-bar between seat and back enables the back to flex with the user's movement (above). Flexible manufacturing techniques allow a choice of laminate, wood veneer solid wood or solid surface table tops (below).

Tougher than she looks.

Nadia meets or exceeds ANSI/BIFMA standards, delivering the strength and durability needed for busy public spaces. Seamless steel chair frames support up to 750 pounds of weight, in both standard and bariatric models. The ganging mechanism maintains rock solid connections and allows for easy reconfiguration while preventing mars to chairs and tables. Wipe-away seats and antimicrobial textile choices help with cleaning.

A Leg Up. Table legs are made from the same exceptionally strong 16-gauge plating-grade steel as chair frames. They also boast the same environmentally friendly epoxy/polyester finishes, applied with an automotive-grade powder-coat system for long-lasting performance.

Armed for Battle. Chair arms are made of solid beech wood and are securely fastened to steel frames to withstand the rigors of high-traffic environments.

Loves to take care of people.

The Nadia patient chair delivers superior comfort and support while easing the transfer between chair and bed. The patented flexing back offers integrated lumbar support. Proprietary Bactiblock® technology inhibits microbial growth on wood surfaces, and many antimicrobial, moisture-repellent fabrics are available.

Hip Chair. This taller seat makes entry and exit even easier for patients coping with arthritis or hip and knee surgeries.

The Take-Care Chair. The angled seat of the patient chair eases both sitting and rising. Ottoman stores under chair when not in use.

Full of choices.

Nadia Guest and Patient Seating offer four arm styles to support different aesthetic visions. Wood arms are hand-sanded and hand-stained to ensure superior color clarity and exceptional grain consistency.
